Bio Electro Magnetic Energy Regulation

Bemer 3000 vs Magnets

The proponents of magnet therapies—the type you find in woolly doona’s, shoe in-soles, bracelets, etc have long made many therapeutic claims. Recently Australia’s premier consumer protection magazine, **CHOICE**, investigated and concluded that not enough evidence exists to back up the many claims, which many believe are not supported by Physics either. Powerful static magnets may block pain signals, with the danger that you don’t heed the pain warning to get proper help. We encourage you to receive an accurate medical diagnosis first, then decide on therapy, and use the **BEMER 3000** to encourage healing, **not to cover over** a potential problem.

Yet, as the **CHOICE** article shows, the public often confuse Pulsed Electromagnetic field therapy, or PEMFT with static magnet therapy and products. They know little about PEMFT, yet surpris-

ingly, elite athletes, medical staff and even Olympic teams have used it for years with great success. This weekend, Nathan Baggaley, double silver Olympic medallist and 2 x world champion kayaker competed successfully on Sydney’s Northern beaches in two events – with his BEMER 3000 – the most technologically advanced PEMFT device available. He, and many of the worlds top athletes never train or compete in events without taking their

BEMER 3000 with them. Doctors, naturopaths, Dentists, Vets, even Race Horse trainers use them everyday with great success to energize the cells, increase performance, endurance, speed up recovery and help prevent injuries.

Informed Members of the

public have used these devices to overcome chronic diseases and other painful conditions, in fact one elderly Catholic priest who suffered for years with a painful chronic condition in the joints of his hands calls the BEMER his "Salvation!"

A recent article in the 1st

division European Soccer Club SC Bern’s newsletter magazine "Spirit" outlined the teams success with the BEMER 3000. The article "Effect Scientifically proved" showed how more and more users find therapy with the pulsed electro magnetic field of the BEMER 3000 to be so effective. The Clinical studies worldwide within the guidelines of Good Clinical Practice have been acknowledged by Medical establishments, and further con-

A well respected Australian consumer magazine had this to say about PEMFT:

ELECTROMAGNETIC FIELD THERAPY

Don't confuse static magnet therapy with other magnet treatments that involve electrical fields — and which have been shown to be effective.

- **Pulsed electromagnetic therapy (PEMT)** induces small voltages in the body via a mild pulsed electromagnetic field. It's been clinically demonstrated to be an effective treatment to aid bone healing. There's also evidence that PEMT may be useful for treating chronic conditions ranging from joint disease to venous ulcers, tendonitis, osteoarthritis, MS fatigue, soft tissue injury and sports injuries.
- **Transcranial magnetic stimulation (TMS)** generates an electric current near the scalp and is showing promising results for treating depression. Be particularly cautious of static magnet products that make claims that seem to be based on research into PEMT or TMS: they're very different treatments and analogies shouldn't be drawn between them.

...Bemer vs Magnets

firmed by many elite sports teams. Bio - Electro - Magnetic - Energy - Regulation (BEMER) activates the metabolic processes on a molecular level. The immune system, all defense mechanisms, blood circulation, etc are activated.

Several Australian athletes, teams and their medical

" Convinced! The benefit is irrefutable."

staff use the BEMER 3000 most successfully. As time is of the essence to an injured athlete, our hotline assists BE-

MER 3000 users everyday to treat illness conditions and injuries effectively with optimal settings. Last month we had several occasions to come to the aid of injured athletes, (and horses!) see them quickly recover, and then go on to perform successfully! Well done!

Call the **HOTLINE** between 10am and 4pm weekdays.

The Ocean Kayak Race

It was a dark and stormy morning...it really was! With the biggest field ever in the Men's Health Ocean Racing Series, over 220 athletes took to the water in a fine drizzle that soaked the supporters and the small crowd of observers. The kayakers, ...well, they were going to get wet anyway.

Bemer 3000 athlete, and double Olympic silver medallist, **Nathan Baggaley**, took over-all honours for the event - winning 3 out of 4 of the exciting sprint races. He came a close second to Tim Jacobs in the long course event. According to Bagg's "Tim was right in my wake the whole race. I knew he was either 'hurting' or 'foxing'". He was 'foxing', but at a price, since he had nothing left to challenge Bagg's in the sprint finals where Nathan could take 3 of the 4 races, making him the event winner for the 5th time in the series. Bagg's won every event overall in which he participated in.

The top 10 from the long course event battled it out in a series of elimination sprints over 800m. From a starting point at sea, they sprint in their kayaks to the beach, then run up to the finish line. (A photo finish is often used to determine the winner - so close is the competition) Mat-

thew Reece put in a solid performance, but sprinting is Bagg's strongest point.

It was a pleasure to deliver to Nathan a new **BEMER 3000 Accupak**. This little battery pack easily plugs into the rear of the BEMER 3000 control unit, and allows you to use it anywhere, anytime - (even on the beach, or in the car!) with-

out having to look for a power supply. The rechargeable unit can be used all day and lasts weeks between charges.

(Available at only \$335.50 inc GST & Delivery)

This unit allows all users, especially athletes, to have their unit available for a performance and endurance boosting treatment on the **BEMER 3000** soon before

Luiz and Nathan with the BEMER 3000 battery pack on Palm Beach

the competition actually starts, and then it is available again soon after an event or training session to clear lactic acid build-up from the exertion and thereby speed recovery and sore muscles, etc. It takes on average only 8 minutes for the **BEMER 3000** to accomplish this task - no illegal drugs, no sweat, no worries!

The next event is on March 13, 2005 in Sydney, crossing the Harbour from Lavender Bay to Manly. Many more kayakers will be using the **BEMER 3000** to build themselves up in the weeks before the event, stealing Nathan's advantage. Will it make a difference to the outcome?

Warm regards - Luiz Teixeira and the Bemer 3000 team
